Ironwood is Australia's leading supplier and miller of reclaimed, recycled and architectural Australian hardwood timbers.

Our recycled hardwood timbers are sought after by Australia's most highly regarded architects, project managers, interior designers, property developers, hoteliers, hospitality groups, restaurateurs as well as DIY renovators.

- **Recycled timber specialists**

Ironwood is Australia's leading supplier and miller of Australian hardwood recycled and reclaimed timber. Whether it be for commercial or residential applications we can mill and supply the timber that will add personality and character to your project. Our recycled Australian hardwoods can be used for a variety of purposes. The quality, look and strength of recycled and reclaimed Australian hardwood timbers far exceeds the quality of new timber products and has the added attraction of being an environmentally sustainable and renewable building material.

- **Great Range**

Whether it be **ironbark, tallowood, blackbutt, red mahogany, grey gum** or **spotted gum** we are the premier suppliers of recycled timber sourced from wool stores, deconstructed bridges, warehouses and railway lines.

- **Our Mill**

Our mill is located at Pampoolah, just outside Taree and is set over 10 acres where we are able to mill recycled timber on time, and to your exact specifications. We can also finish the timber with a range of finishes from wire brushing to rough sawn to Dressed All Round (DAR) to give the timber the exact look that you are after.

- **Environmentally friendly**

A major advantage of using recycled hardwood timbers are the positive environmental effects, including conservation of old growth forests, increased carbon storage and lower greenhouse gas emissions. These recycled timber products can then be re-used to create unique effects in hardwood flooring, decking, beams, joists, trusses, posts, bollards, benchtops, furniture & cladding.

A selection of our most popular products

Individual fact sheets available on request

1. Recycled Flooring

The range, quality, style and look of our recycled and reclaimed timber flooring is renowned and regarded all over Australia. We are able to recover and reclaim flooring timbers from old homes and churches and turn them into stunning flooring that can be used again in homes, offices, commercial buildings and hotels. Our recycled flooring is made out of roof purlings, joists and cut and milled into flooring.

We supply a huge range of floorings from creams, browns to reds, and can mill from 80mm widths up to 250mm widths.

2. Posts and Beams

Our recycled hardwood timber posts and beams have typically been sourced from wharves, bridges and warehouses. Posts recycled from an old structure carry a unique individuality and look. Recycled structural timbers, posts and beams have a far higher level of structural integrity.

Reclaimed hardwood posts are forest logs that are deemed for bio-fuel. Ironwood is able to reclaim the timber through a process that keeps its structural integrity while also providing an environmentally friendly product.

3. Feature Timbers

All timber is unique in individuality and character. At Ironwood Australia we specialise in unique timber loaded with personality. Our feature timbers are full of character and charm and can add that special something to your next project.

Feature timbers can be used across a large range of products such as cladding, flooring, decking, stair treads, posts and beams, joinery applications, fire place mantels or rustic seats and stools.

4. Decking

We are able to mill and supply a wide range of new and reclaimed Australian hardwood timber decking. Our Australian hardwood timbers have been used in a wide variety of residential and commercial uses from typical backyard decks and pool decks in private homes through to coastal promenades and boardwalks, viewing platforms, wharves and nature trails.

Ironwood also offers three unique specialty products called **Iron Deck**, **Peak Deck** and **Park Deck**.

5. Stair Treads

We are able to mill and supply stair treads made from recycled and reclaimed timbers. The bulk of our stair treads are either grey ironbark, blackbutt, tallowwood or spotted gum and can be typically milled to 30mm or 40mm height. We are also able to access larger section sizes of naturally seasoned timbers in thicknesses of 50, 60 and 70mm or more.

Reclaimed and recycled ironbark stair treads are the best placed of any timber species to last and not be affected by heavy traffic.

6. Cladding

We offer a wide range of recycled timber cladding from beechwood with a painted wire brush finish to grey wire brushed hardwoods and also our range of recycled railway sleepers.

Our railway sleepers are sourced from all over NSW. We've got our own special grade to ensure a high quality product.

Feature uses include cladding, feature walls, bar tops, tables and furniture, point of sale counters, menu boards, seating booths, kitchens, bathrooms and bar areas.

7. Heritage Collection

Ironwood is an official recycler of timber bridges for the Roads and Maritime Services Authority.

As heritage bridges are replaced with larger composite bridges, the timber removed is recycled by Ironwood at our mill in Taree.

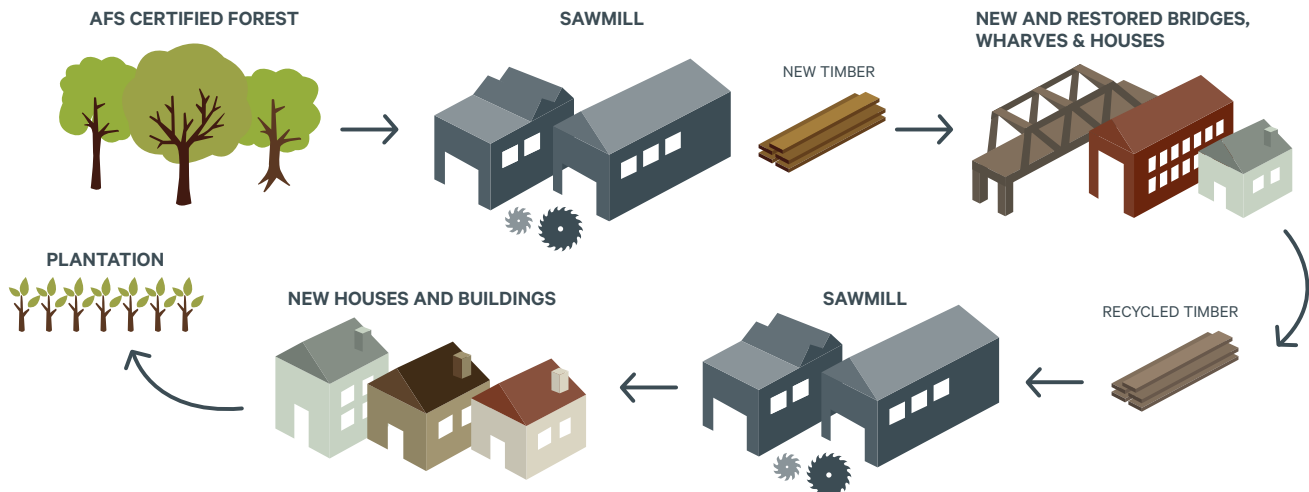

These timbers may have been in situ for over 100 years. They are extremely well seasoned and loaded with character waiting to be released by our milling processes. These timbers are class 1 durability species that often have accents such as bolt holes and surface checking.

FEATURE USES

Bridge Decking	Sawn wire brushed flooring
Trusses	Rustic flooring often with a wire brush finish
Girders	Large structural posts and Beams
Corbels	Create wide stair treads
Stringers and Chords	Milled into feature beams and posts
